Submission

Put the ipynb file and html file in the github branch you created in the last assignment and submit the link to the commit in brightspace

In [1]:
```
import plotly.offline as init_notebook_mode
import plotly.io as pio
import plotly.express as px

init_notebook_mode(connected=True)
pio.renderers.default = "plotly_mimetype+notebook"
```

In [2]:
```
#load data
df = px.data.gapminder()
df.head()
```

Out[2]:

	country	continent	year	lifeExp	pop	gdpPercap	iso_alpha	iso_num
0	Afghanistan	Asia	1952	28.801	8425333	779.445314	AFG	4
1	Afghanistan	Asia	1957	30.332	9240934	820.853030	AFG	4
2	Afghanistan	Asia	1962	31.997	10267083	853.100710	AFG	4
3	Afghanistan	Asia	1967	34.020	11537966	836.197138	AFG	4
4	Afghanistan	Asia	1972	36.088	13079460	739.981106	AFG	4

Question 1:

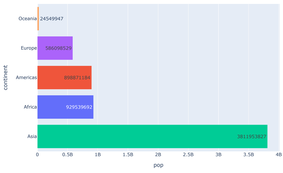
Recreate the barplot below that shows the population of different continents for the year 2007.

Hints:

- Extract the 2007 year data from the dataframe. You have to process the data accordingly
- use plotly bar
- Add different colors for different continents
- Sort the order of the continent for the visualisation. Use axis layout setting
- Add text to each bar that represents the population

In [32]:
```
data_year = df.query("year==2007")
df_2007_new = data_year.groupby('continent').sum()

fig = px.bar(df_2007_new, x="pop", y=df_2007_new.index, color=df_2007_new.index, text="pop")
fig.update_yaxes(categoryorder="total descending")
fig.update_yaxes(layer="above traces")
```

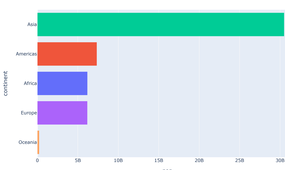


Question 2:

Sort the order of the continent for the visualisation

Hint: Use axis layout setting

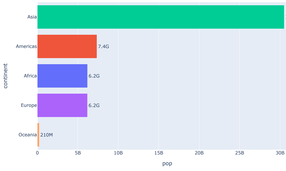
In [4]:
```
## New question 1
```



Question 3:

Add text to each bar that represents the population

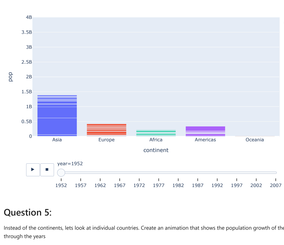
In [7]:
```
## new question 2
```



Question 4:

Thus far we looked at data from one year (2007). Lets create an animation to see the population growth of the continents through the years

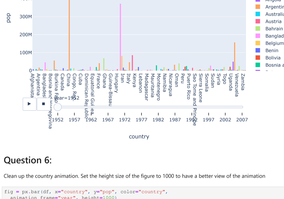
In [33]:
```
fig = px.bar(df, x="continent", y="pop", color="continent",
  animation_frame="year", range_y=[0,4000000000])
fig.show()
```



Question 5:

Instead of the continents, lets look at individual countries. Create an animation that shows the population growth of the countries through the years

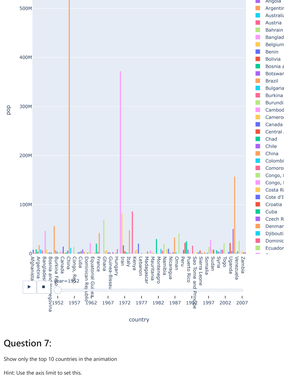
In [39]:
```
fig = px.bar(df, x="country", y="pop", color="country",
  animation_frame="year")
fig.show()
```



Question 6:

Clean up the country animation. Set the height size of the figure to 1000 to have a better view of the animation

In [40]:
```
fig = px.bar(df, x="country", y="pop", color="country",
  animation_frame="year", height=1000)
fig.show()
```



Question 7:

Show only the top 10 countries in the animation

Hint: Use the axis limit to set this.

In [58]:
```
fig = px.bar(df, x="country", y="pop", color="country",
  animation_frame="year", height=1000)
fig.update_xaxes(categoryorder="total descending")
fig.update_xaxes(range=[-.5, 9.5])
fig.show()
```
